

Intelligent Fuel Management

Saving on your bottom line and reducing fraud

Companies are losing millions of rand each year to fuel fraud, theft and abuse. With the Intelligent Fuel Management (IFM) solution, Avis Fleet has already helped our customers save up to 14% of their fuel costs. We saved over R60 million for our customers since the product's inception in 2011.

IFM enables fleet businesses to save on fuel in two important ways:

- It takes control of fuel consumption.
- It reduces the risk of fuel fraud, theft the abuse.

IFM has a 90% accuracy rate in saving between 8% to 14% of your fleet's fuel costs through intelligent fuel monitoring. Developed as a tool to counteract fuel fraud, the IFM solution monitors your fuel usage data transaction by transaction, consolidates the information and integrates it into a single report that allows you to make huge savings that add to your fleet's bottom line.
